Julie P. Marasigan

Group Leader

Member 1 of 5 · Group 4 · CommonWell Usability Evaluation

A. Evaluator Information

Full Name	Julie P. Marasigan
Role	Group Leader
Group	Group 4 — CommonWell Usability Evaluation
Course	HCI2 — Human-Computer Interaction 2
School	Partido State University
Instructor	Michael B. Amata
System Evaluated	CommonWell Healthcare Management System
Evaluation Method	Nielsen's 10 Usability Heuristics
Date of Evaluation	May 2025

B. Heuristic Evaluation Results

Rate each heuristic based on your independent assessment of the CommonWell prototype. Severity: Pass / Low / Medium / High.

#	Heuristic	Severity	Issue / Observation
H1	Visibility of System Status	Medium	Loading spinner absent after form submission; users unsure if action registered.
H2	Match Between System and Real World	Pass	Medical terminology and icons align with user expectations.
H3	User Control and Freedom	Medium	No visible Cancel or Back option inside the booking flow.
H4	Consistency and Standards	High	Button styles and primary colors differ across modules.
H5	Error Prevention	Medium	No confirmation dialog before irreversible actions (e.g., cancel appointment).
H6	Recognition Rather Than Recall	Pass	Navigation icons are labeled; reducing memory demand.
H7	Flexibility and Efficiency of Use	Low	No shortcuts or quick-action options for experienced users.
H8	Aesthetic and Minimalist Design	Pass	Interface is clean with minimal unnecessary information.
H9	Help Users Recognize, Diagnose, Recover	High	Error messages are generic with no actionable guidance.
H10	Help and Documentation	High	No in-app help center, tooltips, or onboarding walkthrough.

C. System Usability Scale (SUS) Response

Rate each statement from 1 (Strongly Disagree) to 5 (Strongly Agree) based on your interaction with the prototype.

#	SUS Statement	1 (SD)	2 (D)	3 (N)	4 (A)	5 (SA)
1	I think that I would like to use this system frequently.				✓	
2	I found the system unnecessarily complex.		✓			
3	I thought the system was easy to use.				✓	
4	I think that I would need the support of a technical person to be able to use this system.		✓			
5	I found the various functions in this system were well integrated.			✓		
6	I thought there was too much inconsistency in this system.		✓			
7	I would imagine that most people would learn to use this system very quickly.				✓	
8	I found the system very cumbersome to use.		✓			
9	I felt very confident using the system.				✓	
10	I needed to learn a lot of things before I could get going with this system.		✓			

D. Overall Remarks

The system shows potential but requires significant improvements in consistency and error handling before community deployment. The absence of any help documentation is the most critical issue for first-time users.

E. Recommendation

Prioritize building a unified design system and adding in-app onboarding guides to reduce the learning curve for community members with limited digital health experience.

Course	HCI2 — Human-Computer Interaction 2
School	Partido State University
Instructor	Michael B. Amata
System Evaluated	CommonWell Healthcare Management System
Evaluation Method	Nielsen's 10 Usability Heuristics
Date of Evaluation	May 2025

B. Heuristic Evaluation Results

Rate each heuristic based on your independent assessment of the CommonWell prototype. Severity: Pass / Low / Medium / High.

#	Heuristic	Severity	Issue / Observation
H1	Visibility of System Status	Medium	No progress indicator during multi-step booking; users left uncertain.
H2	Match Between System and Real World	Pass	Language used matches the target barangay community's vocabulary.
H3	User Control and Freedom	High	Entering the appointment flow traps the user; no obvious exit without losing data.
H4	Consistency and Standards	High	Admin panel UI feels disconnected from patient-facing screens.
H5	Error Prevention	Medium	Date input allows past dates to be selected without warning.
H6	Recognition Rather Than Recall	Pass	Icons with labels reduce the need to memorize navigation paths.
H7	Flexibility and Efficiency of Use	Low	Power users cannot save commonly used appointment types.
H8	Aesthetic and Minimalist Design	Pass	Clean layout with appropriate use of white space.
H9	Help Users Recognize, Diagnose, Recover	High	Error messages lack specificity — 'An error occurred' is not actionable.
H10	Help and Documentation	High	No FAQ, help icon, or contextual tooltips anywhere in the system.

C. System Usability Scale (SUS) Response

Rate each statement from 1 (Strongly Disagree) to 5 (Strongly Agree) based on your interaction with the prototype.

#	SUS Statement	1 (SD)	2 (D)	3 (N)	4 (A)	5 (SA)
1	I think that I would like to use this system frequently.			✓		

#	SUS Statement	1 (SD)	2 (D)	3 (N)	4 (A)	5 (SA)
2	I found the system unnecessarily complex.			✓		
3	I thought the system was easy to use.			✓		
4	I think that I would need the support of a technical person to be able to use this system.			✓		
5	I found the various functions in this system were well integrated.			✓		
6	I thought there was too much inconsistency in this system.			✓		
7	I would imagine that most people would learn to use this system very quickly.				✓	
8	I found the system very cumbersome to use.			✓		
9	I felt very confident using the system.			✓		
10	I needed to learn a lot of things before I could get going with this system.			✓		

D. Overall Remarks

User control is the standout concern — being trapped in a flow with no clear exit is frustrating for any user type, but especially for those already unfamiliar with digital platforms.

E. Recommendation

Add clear Cancel/Back buttons in all multi-step flows and implement smart form validation that prevents logically impossible inputs (e.g., past appointment dates).

School	Partido State University
Instructor	Michael B. Amata
System Evaluated	CommonWell Healthcare Management System
Evaluation Method	Nielsen's 10 Usability Heuristics
Date of Evaluation	May 2025

B. Heuristic Evaluation Results

Rate each heuristic based on your independent assessment of the CommonWell prototype. Severity: Pass / Low / Medium / High.

#	Heuristic	Severity	Issue / Observation
H1	Visibility of System Status	Medium	Success messages after booking disappear too quickly and are easy to miss.
H2	Match Between System and Real World	Pass	Appointment and health record terminology matches clinical norms.
H3	User Control and Freedom	Medium	Editing a submitted form requires restarting the entire flow.
H4	Consistency and Standards	High	Primary action buttons vary in color and placement between pages.
H5	Error Prevention	Low	Some fields accept invalid characters without inline validation.
H6	Recognition Rather Than Recall	Pass	Key actions are surfaced on screen rather than hidden in menus.
H7	Flexibility and Efficiency of Use	Low	Frequently visited sections (e.g., Health Records) require 3+ clicks to reach.
H8	Aesthetic and Minimalist Design	Pass	No visual clutter; interface feels calm and readable.
H9	Help Users Recognize, Diagnose, Recover	High	Form errors highlighted but explanation of how to fix them is absent.
H10	Help and Documentation	High	Complete absence of documentation, tutorials, or embedded help.

C. System Usability Scale (SUS) Response

Rate each statement from 1 (Strongly Disagree) to 5 (Strongly Agree) based on your interaction with the prototype.

#	SUS Statement	1 (SD)	2 (D)	3 (N)	4 (A)	5 (SA)
1	I think that I would like to use this system frequently.				✓	

#	SUS Statement	1 (SD)	2 (D)	3 (N)	4 (A)	5 (SA)
2	I found the system unnecessarily complex.		✓			
3	I thought the system was easy to use.				✓	
4	I think that I would need the support of a technical person to be able to use this system.			✓		
5	I found the various functions in this system were well integrated.				✓	
6	I thought there was too much inconsistency in this system.			✓		
7	I would imagine that most people would learn to use this system very quickly.				✓	
8	I found the system very cumbersome to use.			✓		
9	I felt very confident using the system.			✓		
10	I needed to learn a lot of things before I could get going with this system.			✓		

D. Overall Remarks

The system's aesthetic quality is its strongest point. However, the inconsistency in interactive elements undermines trust and creates confusion, particularly when switching between the patient and admin views.

E. Recommendation

Establish a shared component library and enforce consistent button placement and color coding. Add persistent shortcut navigation for key sections like Health Records.

Group	Group 4 — CommonWell Usability Evaluation
Course	HCI2 — Human-Computer Interaction 2
School	Partido State University
Instructor	Michael B. Amata
System Evaluated	CommonWell Healthcare Management System
Evaluation Method	Nielsen's 10 Usability Heuristics
Date of Evaluation	May 2025

B. Heuristic Evaluation Results

Rate each heuristic based on your independent assessment of the CommonWell prototype. Severity: Pass / Low / Medium / High.

#	Heuristic	Severity	Issue / Observation
H1	Visibility of System Status	High	System provides no loading states; users repeatedly tap buttons thinking action failed.
H2	Match Between System and Real World	Pass	Familiar icons (calendar, profile, medication) used correctly throughout.
H3	User Control and Freedom	Medium	No undo available after deleting a health record entry.
H4	Consistency and Standards	High	Inconsistent use of modals vs. page navigation for related actions.
H5	Error Prevention	Medium	Deleting a record has no confirmation prompt — accidental deletion is possible.
H6	Recognition Rather Than Recall	Pass	Dashboard surfaces the most-used features without requiring memory.
H7	Flexibility and Efficiency of Use	Medium	Admin users navigate the same long path as patients; no role-based shortcuts.
H8	Aesthetic and Minimalist Design	Pass	Visual hierarchy is clear; important information is appropriately emphasized.
H9	Help Users Recognize, Diagnose, Recover	High	System crashes display raw technical errors not meant for end users.
H10	Help and Documentation	High	First-time admin users have no guide for configuring the system.

C. System Usability Scale (SUS) Response

Rate each statement from 1 (Strongly Disagree) to 5 (Strongly Agree) based on your interaction with the prototype.

#	SUS Statement	1 (SD)	2 (D)	3 (N)	4 (A)	5 (SA)
1	I think that I would like to use this system frequently.			✓		

#	SUS Statement	1 (SD)	2 (D)	3 (N)	4 (A)	5 (SA)
2	I found the system unnecessarily complex.			✓		
3	I thought the system was easy to use.			✓		
4	I think that I would need the support of a technical person to be able to use this system.		✓			
5	I found the various functions in this system were well integrated.			✓		
6	I thought there was too much inconsistency in this system.			✓		
7	I would imagine that most people would learn to use this system very quickly.			✓		
8	I found the system very cumbersome to use.			✓		
9	I felt very confident using the system.				✓	
10	I needed to learn a lot of things before I could get going with this system.		✓			

D. Overall Remarks

Missing loading states are a critical usability flaw. Users instinctively retry actions they believe failed, potentially causing duplicate submissions in healthcare-critical contexts like appointment bookings.

E. Recommendation

Implement loading spinners and success/error toast notifications for every user action. Add confirmation dialogs before any irreversible operation, especially record deletion.

System Evaluated	CommonWell Healthcare Management System
Evaluation Method	Nielsen's 10 Usability Heuristics
Date of Evaluation	May 2025

B. Heuristic Evaluation Results

Rate each heuristic based on your independent assessment of the CommonWell prototype. Severity: Pass / Low / Medium / High.

#	Heuristic	Severity	Issue / Observation
H1	Visibility of System Status	Medium	Sync status between patient and admin views is not communicated to either user.
H2	Match Between System and Real World	Pass	The barangay-specific context is reflected in the system's terminology appropriately.
H3	User Control and Freedom	Medium	Users cannot retrieve accidentally dismissed notifications.
H4	Consistency and Standards	High	Typography size and weight vary inconsistently between similar UI components.
H5	Error Prevention	Medium	No warning when navigating away from a partially filled form.
H6	Recognition Rather Than Recall	Low	Some secondary features are buried behind non-obvious menu paths.
H7	Flexibility and Efficiency of Use	Low	No search functionality across records or appointments.
H8	Aesthetic and Minimalist Design	Pass	Visual design is clean; avoids overwhelming the user with dense information.
H9	Help Users Recognize, Diagnose, Recover	High	Validation errors appear after submission rather than inline during input.
H10	Help and Documentation	High	Community users with low digital literacy have no guidance or tutorial access.

C. System Usability Scale (SUS) Response

Rate each statement from 1 (Strongly Disagree) to 5 (Strongly Agree) based on your interaction with the prototype.

#	SUS Statement	1 (SD)	2 (D)	3 (N)	4 (A)	5 (SA)
1	I think that I would like to use this system frequently.				✓	
2	I found the system unnecessarily complex.			✓		
3	I thought the system was easy to use.			✓		
4	I think that I would need the support of a technical person to be able to use this system.			✓		
5	I found the various functions in this system were well integrated.			✓		
6	I thought there was too much inconsistency in this system.			✓		
7	I would imagine that most people would learn to use this system very quickly.				✓	
8	I found the system very cumbersome to use.			✓		
9	I felt very confident using the system.			✓		
10	I needed to learn a lot of things before I could get going with this system.			✓		

D. Overall Remarks

Given that 62.5% of respondents had no prior experience with similar systems, the total absence of help documentation is the single biggest risk to adoption. Onboarding must be treated as a core feature, not an afterthought.

E. Recommendation

Design a first-run onboarding experience with a progress-based tutorial covering appointment booking and health record viewing. Add a persistent help icon accessible from every screen.
